

## GE HealthCare and Region Västra Götaland (VGR) Announce Collaboration for Centricity High Acuity

GE HealthCare and VGR announce a multi-year project that aims to replace the existing Clinical Information System (CIS) in the operating room and intensive care units with the Centricity™ High Acuity platform, covering over 1,000 beds. The public organization is seeking to modernize its hospital IT systems to meet the today's care needs as well as preparing for the future. GE HealthCare's solution is capable of providing advanced clinical decision support as well as meeting Sweden's strict patient data privacy regulations.

Region Västra Götaland, located in the western part of Sweden, is home to over 1.7 million people and covers 49 municipalities, which also includes the city of Gothenburg. With 53,000 employees<sup>1</sup>, it is also one of Sweden's largest employers. The region's primary responsibilities are providing healthcare and medical treatment, across four hospital groups and four individual hospitals, including the prestigious Sahlgrenska University Hospital.
